Available Report Types

In order to view sample reports in PDF form you must first have a PDF viewer installed. Such a viewer is available from [Adobe](#)

Report Name	Report Description	Report Category	Sample Report
Civilian Casualties	The Civilian Casualties report summarizes the user's choice of either injuries or fatalities involving civilians. The report breaks down the numbers into five graphs: by property use, by incident type, total injuries, fire incidents, and non-fire incidents. The last three graphs are grouped using a user-chosen time period including the day of the week, day of the month, the hour of the day, month of the year, quarter of the year, week of the month, or week of the year.	Casualty Reports	
Data Inventory By FDID	The Data Inventory by FDID report summarizes incident data within a given alarm date range by presenting a table for each selected fire department that provides counts of various incident modules broken down by incident validity, original incident data version, and incident publication state.	Fire Reports	
Data Quality	The Data Quality report quantifies the quality of reported incidents as a total number and percentage of the presence of key fields on various modules such as the Basic Module, Fire Module, and Apparatus Module.	Management Reports	
Detailed Selected Statistics	The Detailed Selected Statistics report summarizes incidents by the presence and frequency of a particular coded field as chosen by the user (such as the Cause of Ignition field on the Fire Module). Additionally, the user may add ad hoc filters to further narrow the incidents included. The results include the frequency, frequency percentage, number of exposures, average number of EMS and suppression personnel and apparatus, average man hours, total man hours, and average response time.	Management Reports	
FDID Incident Type Summary	The FDID Incident Type Summary report summarizes counts of incidents by incident type (incident type in the 100s, 200s, 300s, etc., U [Undetermined - 4.1 conversion], or none) and total incidents for each FDID chosen by the user. A total for all FDIDs included is given at the end of the report.	Incident by FDID Reports	
Fire Department Information	The Fire Department Information report provides counts of fire service personnel, incidents, exposures, aid given, and casualties at a per-fire department level. The report additionally quantifies the number of matching fire departments that have and have not reported matching incidents within the specified period.	Incident by FDID Reports	
Fire Report by FDID	The Fire Report by FDID report creates a summary of fire activity for each FDID selected by the user. The summary is presented as one page per FDID and includes a table by four major fire incident types (structure fires, vehicle fires, outside fires and other) and a pie chart including the top five fire types for that FDID. The table includes the counts and percentages for both that FDID and the FDID within the group of FDIDs begin reported upon.	Fire Reports

and all aid types. The user can also choose whether to sort the results initially by FDID or Incident Date (and next by Incident Date or FDID then incident number and exposure). Other selection criteria include the FDIDs to include, the date range, data version, incident validity and release status. For each reported incident, the FDID, FDID state, incident date, incident number, exposure number, assisted/ing FDID, assisted/ing FDID state, and assisted/ing incident number. The report ends with the total number of mutual aid incidents.

NFIRS Users	Provides a listing of NFIRS 5.0 user account information.	Management Reports	
NFIRS Vendors	The Vendor Report generates a list of Vendors, their NFIRS Vendor IDs, and contact information.	Management Reports	
Residential Structure Fire Causes	The Residential Structure Fire Incidents by Fire Cause Category report summarizes fire incidents in residential structures. The rows of the report are broken down by computed cause code/categories. The information summarized includes the count and percentage frequency of each cause code, the count and percentage of both civilian and fire fighter injuries and casualties, and the count and percentage of property, contents, and total loss. The computed cause codes include such categories as smoking, heating, and cooking.	Fire Reports	
Structure Fire Causes	The Structure Fire Causes report summarizes structure fires by cause. The cause code may be either fire cause or priority cause category. Optionally, the results can summarized by a coded field within the cause code.	Fire Reports	
Structure Fires by Property Use	The Structure Fires By Property Use report summarizes structure fire incidents by several property use categories. The categories are residential property uses, public property uses and other property uses, which are displayed graphically using bar charts. The report ends with a numerical summary of the same categories further broken down by counts of fires, fire fighter deaths & injuries, civilian deaths & injuries, and property loss amounts.	Fire Reports	
Summary by Incident Type	The Summary by Incident Type report is a table of incidents categorized by frequency, percentage of total incidents, mutual aid statistics and exposures broken down by fires, EMS, and other incident types. The report also has a summary of dollar loss and casualties.	Incident Reports	
	The Tally report lists several counts and percentages for a selected set of incidents that includes the frequency of occurrence, civilian and fire service injuries and deaths, and property, contents and total loss. These are organized by one of a number of coded fields chosen by the user. Among these choices are incident type, property use, cause of ignition, and Hazmat disposition.	Incident Reports	
Unresolved Fire Incidents	The Unresolved Fire Incidents report contains a list of all fire incidents with a fire cause of "Undetermined" or "Investigating" with an incident date that occurred on or before a date given by the user. The report includes the FDID, the fire department name, the incident date, the incident number, the incident type, and the cause (which will be either Undetermined or Investigating). The report can be sorted either by FDID or fire dept. name and includes a sub-total of incidents for each one.	Investigation Reports

Summary by Incident Type

Summary By Incident Type Report

The report provides a summary of NFIRS incidents

- Categorized by frequency, percentage of total incidents, mutual aid statistics and exposures broken down by fires, EMS, and other incident types.

And, provides summary information on casualties, and the total dollar loss for fire incidents.

- **Note:** No Activity incidents (N status) are not included in any frequency count.

Enhanced Reports

1. Refine Reports Using Coded Fields
2. Ad Hoc Reports Using Additional Filter Parameters

Refined Reports

The Coded Field will be used to group the output of the report (Incidents will be summarized at the level of the selected Coded Field).

A pair of drop-down list boxes provide the user with the capability to select a Coded Field for the report.

- The first list box contains the various NFIRS 5.0 modules.
- A selection of a module from this list box will re-populate the list box on the right with the Coded Fields available for the selected NFIRS 5.0 Module.

Ad hoc Filters

Enable the user to create additional filter parameters that will further limit the incidents that are retrieved for the report.

- The user may select from a list of available coded fields for filtering the incident content of the report.
- Incidents that match each filter's range will be included in the calculations for the report.
- May be available in combination with the Select Code Field option or may be a choice by itself, depends on the report.

For available codes see the NFIRS 5.0 Complete Reference Guide

NFIRS 5.0 Web-based Tools

Welcome to the USFA NFIRS 5.0 Web-based Tools section. General information about the new web-based tools is provided below.

NFIRS 5.0 Web-based Tools

New web-based tools which provide reporting and data transfer through the use of standard Internet technology are now being implemented by Program Managers participating in the USFA NFIRS 5.0. Following each tool, a phased approach for its release and implementation is provided. Program Managers to review system requirements and plan their state's user participation.

If State Program Managers choose to do so, they may assign to selected users in their state the necessary permission for one or more of the new web-based tools. The user must have an activated NFIRS 5.0 User account with necessary permissions assigned for the tool use or action.

Using the web-based NFIRS 5.0 Tools requires Internet connectivity, a browser version and PC that meets necessary system requirements as outlined for each tool on its information page.
